

Preassembled Walk-Door Systems

Walk doors are often a problem for builders and erectors. Damage, lost parts, quality of components, difficult hardware installation, and door installation time, among others, are issues faced every day with traditional knock-down door systems.

The Corle Building Systems preassembled door system solves these common problems. The preassembled door system is completely factory assembled, including all hardware and the subframe system (framed opening). As a result, the pre-assembled door system can typically be installed in less than thirty minutes. No additional cutting, welding, or painting is necessary. In fact, we even go so far as to include the glass in our lite kits.

Corle Building Systems also strongly believes that builders need and want choices. There are options for sizes, colors, door gages, and door skin types in addition to the hardware options listed. The choices are virtually unlimited.

Listed below, and on the next page, are the standard components that make up the Corle Building Systems preassembled door system, along with standard options and accessories. We are confident that after reviewing the information you will agree the preassembled door system is the right door for you.

COMPARE THESE QUALITY STANDARD FEATURES AND COMPONENTS

- Completely Factory Assembled and Squared
- Subframe System/Framed
- Opening Included
- Insulated Polyurethane Core (R 14,5)
- Galvanized Door (20 ga.) and Frame (16 ga.)

- ADA Approved Aluminum Threshold
- 3-Fingered Poly Door Sweep
- Extended Frame Header
- Custom Baked-On Top Coat
- Heavy Gage Adjustable Jamb Clips
- Closer Reinforcement In All Doors
- Heavy Duty Wood Crate

For Standard Metal Walls

For Masonry Walls

For Fire Rated Walls

Factory-Installed Options & Accessories

Standard Duty Closer

Standard duty Grade 3 closer with backcheck feature and two separate adjustments for controlling closing and latching speeds. Parallel arm application standard.

Heavy Duty Closer

Heavy-Duty Grade 1 closer with lockcheck feature and two separate adjustments for controlling closing and latching speed. Parallel arm application standard.

Panic Device with Lever

Grade 1 rim-type panic with exterior key-in-lever trim. Meets ADA requirements

Lever Lock

Entry lock with lever handle on both sides. Key-in-knob on exterior side and thumb turn push button on interior side. Meets ADA requirements. Grade 1.

Ball-Bearing Hinges

Full mortise 4-1/2" x 4-1/2" ball bearing hinges with non-removable pin.

Mortise Lock with Lever

Intended for heavy use and added security. Combines the benefits of lock and deadbolt functions. Meets ADA requirements.

Latch Guard

Highly recommended for added security at minimal expense. Steel plate prevents latch tampering.

18-Gage Door

Upgrade from standard 20 gage door. Recommended for heavy use applications.

Lites

- Narrow
- Vision
- Half Glass

Includes tempered or insulated glass.

Textured Door Skin

Available in lieu of the standard 20 gage smooth skin door. May help camouflage small nicks and dents.
